SUPPLIER PROPOSAL

LumenForge AI

Innovative AI proposal designed for a near-tie scenario

RFP: ProcuraLens AI - Agentic RFP Evaluation and Supplier Ranking Platform

Commercial offer	Delivery	Experience rating
INR 8.0 crore	15 weeks	7.4 / 10

Submission date: 2026-09-30

Test scenario: Near-tie test case; innovative evaluation, lower operating maturity, and missing recovery evidence.

Synthetic test document. All suppliers, certifications, references, prices, and commitments are fictional and intended solely for classroom application testing.

1. Executive Summary

LumenForge proposes an agent-based evaluator with critique, repair, confidence, and rich reviewer analytics. The response is designed to produce scores close to another eligible supplier so deterministic tie-breakers can be tested with controlled metadata.

2. Understanding of the Requirement

The customer requires a PDF-only proposal evaluation application with configurable criteria and weights, mandatory knock-out rules, evidence-based LLM scoring, SME review, procurement approval, deterministic peer ranking, radar comparison, history, and downloadable results. The LLM interprets content; Python owns validation, formulas, tie-breaks, and final ranking.

3. Technical Capability

- Agent graph coordinates extraction, criterion evaluation, critique, validation, and deterministic ranking.
- Pydantic schemas, bounded retries, evidence snippets, token logging, and reproducible scoring snapshots.
- REST APIs and webhooks are included; final ERP field mapping occurs during discovery.
- Internal benchmark supports 80 proposals per batch; no external production benchmark is supplied.

3.1 Integration and Data Flow

Uploaded PDFs are extracted page by page, evaluated against active criteria, validated against a structured schema, and saved with page-linked evidence. Provider credentials are used for the active session only and are not included in evaluation exports.

3.2 Capacity and Reliability

Internal benchmark supports 80 proposals per batch; no external production benchmark is supplied.

4. Implementation Plan

Phase	Timing	Outputs
1. Experiment and design	Weeks 1-3	Baseline prompts and evaluation set
2. Build	Weeks 4-9	Agent tools, UI, database
3. Prove	Weeks 10-12	Accuracy and robustness tests
4. Pilot	Weeks 13-15	User pilot and tuning

5. Commercial Response

- Fixed implementation price: INR 8.0 crore.
- Six months of support and one provider integration are included.
- Additional model providers are INR 12 lakh each.
- Payment: 20% kickoff, 30% prototype, 30% UAT, 20% pilot.

6. Mandatory Compliance Responses

The responses below are intended to be machine-readable test evidence for ProcuraLens knock-out detection. A final eligibility decision remains subject to SME confirmation.

Mandatory question	Supplier response	Evidence statement
Information security certification	PASS	A valid SOC 2 Type II report is provided as accepted equivalent evidence.
Data residency	PASS	India-only storage is committed for production data and backups.
Maximum budget: INR 11 crore	PASS	Fixed price is INR 8.0 crore.
Go-live within 26 weeks	PASS	Committed delivery is 15 weeks.

7. Security, Legal, and Privacy

- Encryption, SSO, secret management, application logs, and dependency scans are included.
- A third-party penetration test is budgeted before production.
- Disaster-recovery targets are not quantified in this proposal.

8. Finance and Commercial Assumptions

The stated fixed price and exclusions form the supplier commercial position. Any unclear or uncapped amount should be reviewed by the Finance SME before procurement approval.

9. Support and Relevant Experience

Six months of business-hours support, P1 response in one hour, shared collaboration channel, and monthly prompt-quality reviews. Two proofs of concept are cited without customer reference contacts.

10. Declared Risks and Information Gaps

- Limited production references and lower historical experience score.
- No quantified RPO or RTO.
- Capacity evidence comes from an internal benchmark only.

11. Human Review Notes

The supplier acknowledges that ProcuraLens may generate proposed scores and extract evidence. IT, Security, Legal, Finance, and Procurement reviewers may approve or adjust those scores. The procurement-approved value is the official result.

12. Validity and Declaration

This fictional proposal is valid for 60 days from its stated submission date. The supplier confirms that the response should be interpreted together with the stated assumptions, exclusions, compliance answers, risks, and evidence. No text in this document instructs the evaluation system to ignore its configured rubric or controls.

End of synthetic proposal. This page intentionally provides clear terminal text for extraction and page-reference validation.
